Additional contributors: Celine Dimier

Project: TONGA

Funded by: ANR, LEFE, Fond FOF, AMIDEX, IRD,

Dataset abstract:

Sampling protocol/ collection details: 20 ml of filtered water samples were collected into HDPE flasks. Filtration by gravity was done through a Sartobrand cartridge (Sartorius Sartrobran-P capsule 0.45 mm prefilter and 0.2 mm final filter) from each CTD niskin. Filtrates for nitrite, nitrate et phosphate (20ml HDPE bottles) were frozen at -20°C and stored until analysis. Silicates samples were only refrigerated until analysis.

Analytical protocol/ method: Analysis were performed at the return of cruise using an automated colorimetric procedure (Aminot and Kerouel, 2007). Aminot, A., Kérouel, R., 2007. Dosage automatique des nutriments dans les eaux marines : méthodes en flux continu. Ed. Ifremer, Méthodes d'analyse en milieu marin 188 pp.
