Email : uitz@obs-vlfr.fr ; jras@obs-vlfr.fr ; celine.dimier@obs-vlfr.fr

Notes:

1 Filters extracted in 100% methanol, disrupted by sonication and clarified by filtration (GF/F Whatman). Extraction time lasted 2 hours.

2 Analysis by HPLC was carried out the same day. Instrument: HPLC 1200

3 undetected pigments are represented by "LOD" (Limit of detection, see Note 7)

4 The analytical procedure is described in:

Ras J, Uitz, J, and H. Claustre (2008). Spatial variability of phytoplankton pigment distributions in the Subtropical South Pacific Ocean: comparison between in situ and modelled data. Biogeosciences, 5, 353-369

5 Detection of carotenoids and chlorophylls c and b: 450 nm, chlorophyll a and derivatives: 676 nm, bchl_a : 770 nm.

6 Performance metrics:

Précision d'injection Tchl_a : 0.2%

Précision Etalonnage : 0.35%

Justesse Tchl_a (SeAHARRE-6): 3.72%

Justesse d'étalonnage : 0.45%

Précision de temps de rétention : 0.02%

7 Limits of detection : calculated in ng per injection and as the concentrations corresponding to a signal:noise ratio of 3 and for a filtered volume of 1 L.

8 Tchl_a concentrations checked against CTD fluorescence signal

9 Analyst: Celine Dimier and Marie-Laure CROS

10 Quality control evaluation of the peak QA=1 = "good"

QA=2 = "acceptable"

QA=3 = "questionnable"
